LUCAS SEHNEM

Product Manager I Product Strategy & Technical Execution I SaaS & AI

Product Discovery · Roadmap · Monetization · UX · Product Delivery

Santiago, RS · Open to remote · **lucas.sehnemb@gmail.com** · **linkedin.com/in/sehenth** · **lsehnemportfolio.pages.dev**

Summary

Product Manager with experience in digital products since 2017, including financial software, Web3 platforms and AI-powered SaaS. Experienced in product discovery, roadmap definition, backlog prioritization, monetization strategy and collaboration with Engineering, from opportunity identification to solution delivery.

Co-founder and Technical Product Manager of ProfResolve, an AI SaaS for teachers with 1,200+ organically registered users and recurring revenue. I led research with 100+ teachers and led the development and launch of the product, including decisions on UX, architecture, AI reliability and monetization models.

Professional Experience

ProfResolve

Co-founder & COO I Technical Product Manager

2026 – Present I Brazil · Remote

- Co-founded and lead product at ProfResolve, an AI SaaS for teachers, with 1,200+ organically registered users and recurring revenue from subscriptions and credit purchases.
- Ran discovery with an open survey to 100+ teachers and continuous user feedback to guide product priorities and evolution.
- Defined roadmap, UX and prioritization, plus the product's hybrid monetization, combining monthly plans with one-off credit packs, calibrating the price of each generation to the cost of the AI model.
- Built the product end to end as the sole developer, including frontend, backend, database, authentication, payments, storage, APIs and integrations.
- Designed AI reliability mechanisms with fallback across providers, retries, circuit breaker, observability and automatic credit refunds on failures.
- Made product and architecture decisions from trade-offs observed in real usage, including reverting SSE streaming when predictability and content integrity became more important than progressive response.

Cripto Host

Product Owner & Project Manager I Web3 Research

2025 – 2026 I Remote · Latin America

- Defined and prioritized the backlog for the Nodes-as-a-Service offering, turning blockchain infrastructure research into requirements and technical specifications to guide product decisions and implementation with engineering.
- Followed platform development, assessing changes, aligning demands with the technical team and contributing to product decisions and roadmap evolution.
- Researched and qualified more than 100 blockchain node opportunities; more than 20 were configured and made commercially available by Cripto Host.
- Conceived and structured the Cripto Host Docs and Decentralized Hosting products, leading technology research, requirements definition and feature planning. Decentralized Hosting remained in development, with no commercial launch.
- Developed pricing, user acquisition and commercial positioning strategies.

TRON DAO Ecosystem

Growth, Customer Success & Product Operations I Web3

2019 – 2025 I Global · Remote

DLive.tv (2019 – 2021) → Freelancer (2021 – 2023) → TRON DAO (2023 – 2025)

Product Development & Operations I 2023 – 2025

- Took part in development, pre-launch validation and evolution initiatives for Web3 digital products, collaborating with global Product and Engineering teams on research, testing and identification of improvement opportunities.
- **SunSwap V3:** contributed to product improvement through research, testing, user feedback analysis and identification of technical issues, collaborating with developers across improvement cycles.
- Collaborated with global Product, Growth and Engineering teams, consolidating research, identified issues and feedback into weekly reports for leadership.
- Contributed to an initiative migrating thousands of users from HTX and served as a focal point for Latin American requests, especially in the Portuguese- and Spanish-speaking markets, connecting users' needs to global product teams.

Growth, Community & Customer Success | 2019 – 2022

- Worked in Growth, Community and Customer Success on the DLive and BTT Stake products, providing global support in Portuguese, English and Spanish.
- Handled 65+ daily tickets via Zendesk, keeping an average first-response time under 5 minutes for more than two years.
- Ran onboarding, product localization and documentation activities, connecting recurring user feedback and pain points to product teams.
- **New DLive TV:** took part in meetings with the global DLive team to discuss the New DLive TV roadmap, following feature planning and product evolution.
- **DLive Protocol:** took part in beta testing of DLive Protocol, a decentralized product in the TRON ecosystem, contributing to feature validation before launch.

Bit2Me

Community Manager & Social Media Manager
2022 – 2023 | Global · Remote

- Coordinated communication and outreach initiatives for Brazil and Latin America over five months, contributing to Bit2Me's regional expansion and positioning strategy in collaboration with the global team in Spain.
- Built the Brazilian Bitmeiros community on Telegram from scratch, reaching 10,000+ organic members in under five months through engagement strategies and education on cryptocurrencies and the exchange's products.
- Planned and executed multichannel content strategies for YouTube, TikTok and Instagram, including audiovisual production, localization of materials and collaboration with influencers.
- Managed community relations and engagement, gathering feedback and identifying user needs to share Brazilian market insights with global teams.

Play9 / NineBlocks

Community Manager | Product Research & Discovery
2021 – 2022 | Brazil · Remote

- **NineForest:** contributed to the conception of a blockchain- and NFT-based sustainability solution, owning the technology research and the whitepaper, in collaboration with Engineering, UI and leadership.
- **NineBlocks:** took part in the development of a Brazilian NFT marketplace inspired by OpenSea, conducting blockchain technology research, drafting the whitepaper and commercial prospecting. Development was discontinued in 2022.
- Collaborated on Web3 initiatives involving MRV Construtora and Globo, taking part in research, product discussions and alignment with different teams.
- Conducted technology research and market analysis to identify opportunities, assess solutions and support decisions on product features and direction.
- Supported the organization and tracking of project demands and activities, contributing to alignment between business priorities and technical development.

DSC Investimentos

Digital Product Manager | Algorithmic Trading & Financial Markets
2017 – 2019 | Porto Alegre, Brazil · Hybrid

- Managed a portfolio of 5 algorithmic trading solutions for B3 and Forex, built on the MetaTrader 4 and 5 platforms, including DSC Scalper V2, V2 HEDGE, V3, AI MTG GRID and Money M.
- Defined requirements and priorities, coordinating deliveries in partnership with 2 developers and the founder.
- Coordinated development cycles, testing, backtesting and strategy validation, aligning business needs, technical requirements and solution adjustments.
- Turned customer feedback, market research and usage indicators into priorities for improvement and portfolio evolution.
- Led the evolution of solutions sold through licensing, subscription and custom development, aligning features with client needs.

YouTube / Independent

Content Creator across Multiple Channels
2010 – Present | Brazil

- Built channels with 60M+ views, 250k+ followers and 2,500+ videos, managing content strategy, metrics and organic growth.

Selected Projects

Personal product-development projects, with no customers, subscribers or revenue.

Super Squad AI

AI Product · Multi-Agent Systems · Technical Product Management | 2026

- Conceived and built a local multi-agent orchestration platform for software development, defining product vision, requirements, architecture and roadmap.
- Structured a Leader + Workers architecture, isolated execution via Git worktrees and SQLite persistence, with coordination mechanisms, controlled autonomy and failure recovery.
- Defined automated validation processes and two-stage verification, prioritizing reliability, security and delivery integrity.

SentinelCore AI

Technical Product · AI Architecture · Windows Desktop | 2026

- Conceived and built the functional foundation of an advanced diagnostics application for Windows, defining product vision, requirements, roadmap and a hybrid AI architecture.
- Structured a C#/.NET backend with hardware and operating-system audits, local persistence in Markdown/SQLite, and 56 passing automated tests.
- Defined an optional AI strategy for interpreting diagnostics, prioritizing safety, traceability, evidence-based analysis and risk control.

Project Relay

Technical Product · SaaS & Automation · Product Development | 2026

- Conceived and built a private MVP for managing products, offers and campaigns, defining vision, requirements, roadmap, architecture and development priorities.
- Structured WhatsApp campaign journeys, including recipient management, consent, templates, simulated sends, queues and operational history.
- Implemented automated workflows and data persistence, validating 6 end-to-end journeys, prioritizing traceability, security and readiness for future integrations.
